WorkAir is a unique provider of services in SA. Specifically designed for the delivery of health solutions to workplace health and injury management as well as aviation medicine.

The Best People Specialist, Experienced, Reliable Personnel

Our team consists of health and medical professionals, including Occupational Physicians, Doctors, Physiotherapists, Occupational Health Nurses and Industrial Paramedics. All team members have extensive occupational health experience and are highly qualified in their chosen profession and specialty area. Doctors skilled in Aviation Medicine also form part of our group. Our health professionals are supported by a team of experienced administration staff. We are proudly South Australian.

Our Medical Centre

The WorkAir Injury Medical Centre is conveniently located within the Adelaide Airport site and has ample free off street parking including disabled access. The complex has very comfortable surroundings and contains state of the art equipment including the following services:

- Work Injury Casualty Treatment
- Medical Consultation
- Pre-Employment Medical Assessments
- Transport & Aviation Medical Assessments
- Audiometry, Spirometry & ECG testing
- Physiotherapy treatment and assessment
- First Aid training for our corporate clients
- Vaccinations and Drug Testing

Initial Injury Care

Injury prevention is every company's priority, but accidents happen and when they do, your company should be confident in the knowledge that from the moment of injury, your company and the worker are in capable hands.

WorkAir offers your company strategies to handle these situations:

First Aid Training:

WorkAir offers you National Accredited and SafeWork SA approved first aid and emergency training to meet your legislative requirements. Our Nurses and Paramedic instructors provide a unique 1 Day Senior First Aid Program. This 1 day program saves you lost time and money in training. The treatment provided by your work site first aiders is also likely to save you lost time and money when an injury does occur.

Worksite Injury Response:

Injured workers requiring non-life threatening treatment can be seen by our staff at the Medical Centre (Extended opening times are planned in 2008). We aim to minimise lost time injuries. Our Nurses & Paramedics available for relief or long-term placements at our client's sites.

Medical Assessments

Pre-Employment and Pre-Placement Medicals

Effective risk based pre-placement medical assessments can be used to ascertain a job candidate's medical and physical capacity to meet the demands of specific jobs. Assessments are conducted by WorkAir Nurses & Medical Practitioners either at our centre or your work site. The examination provides employers with a baseline health assessment and, in cases where job demands are clearly specified, will assist to identify whether an employee is medically suitable for the role for which they are applying.

Specialised Medical Assessments

- Aviation/pilot medicals
- Fitness to drive medicals
- Rail medicals
- Dangerous goods licenses
- Travel and visa medicals
- Recreational diving

Physical Capacity Screening and Musculoskeletal Assessments

Many workplace injuries are the result of a mismatch between the physical demands of the working task and the capacity of the worker. We offer a range of physical capacity assessments, conducted in conjunction with pre-employment screening, to reduce the risk of injury. These are conducted by our Medical Practitioners, Nurses and Physiotherapists
